Frontend :

We want to build a Calendar with angular :

- ⑩ when the Component has open opened :that will sho the current Month and year
- ⑨ the component should have a Month overview with calendar week
- ⑨ the component should have a 2 button : previous and next
  - ↘ next to show the next month
  - ↘ previous to show the last month
- ⑨ the user can click on a day
  - ↘ when the day has been clicked : a modal muss be showin up with form
  - ↘ the form must have 2 button : cancel and save
  - ↘ the form should have a dropdown menu to choose the project that worked on
  - ↘ the form must have also input text for Begin (type date)
  - ↘ the form must have other input text for pause
  - ↘ the form must have other input text for end
  - ↘ the form must have other input text for comment

- ⑨ the user should have the aibility to put his time : work begin , work end , pause and and project and comment and the can save them .
- ⑨ When the user save his time : the modal should be disappear and in the calender must be the working hours shown up
- ⑨ **exemple** : begin : 08:00 , pause : 00:30 , end : 17:30
  - ✦ 9 hrs must be shown up (17:30 – 08:00 – 00:30)...
- ⑨ we want to have also 3 other buttons : **export pdf or excel , print**
  - ✦ **EXPORT : should export the workable hours on the month**
  - ✦ **Print : should print the workable hours on the month**

Exemple the calendar should look like this and for every day that should be also the worked hours when you save the hours : you must use backend with spring boot and MongoDB. Good luck
